

“Laser-like results!”

no! no!

It's finally here! The at home alternative to laser hair removal that painlessly removes unwanted hair, and actually helps keep it from growing back!

Say yes!yes! to no!no!™ and you could be hair-free all summer long!

What would you say if I told you that one day soon, you could be removing your unwanted hair for the very last time?! Well, now you can achieve professional results at home with **no!no!** — the breakthrough hair removal technology that, not only slows down hair regrowth, over time it actually helps keep it from growing back — at first for weeks, then even months at a time. More exciting is that what little hair does grow back is often finer, sparser and lighter. And many customers happily report that they hardly see any regrowth at all!

Funny name. Serious results!

It may sound cute (and it certainly looks cute) but make no mistake, **no!no!** is unlike anything you have ever seen before. It's not like an epilator that just rips hair out of the skin — ouch! It's not like a razor that leaves you with nicks and cuts and the hair grows back almost as soon as it's gone. And forget about the mess of those creams! **This is different.**

no!no! is the only technology in the world that will give you laser-like results, in the privacy of your own home!

And unlike laser, there is not one bit of pain!

Really, not one little bit. Although it may give laser-like results, **no!no!** is not really a laser at all. It's actually a brand new patented technology called Thermicon™.

Here's how it works: As you glide **no!no!** over the skin, the patented Hot Blades slice hair off at the surface removing the hair — but that's not the exciting part. At the same time, it sends a gentle pulse of heat right down the hair shaft to the root. This slows down the appearance of hair regrowth. It's simple, It's painless and the results get better and better over time!

It's clinically proven to reduce hair regrowth by up to 64% “so you know it works!”

Clinical studies have shown that hair regrowth is visibly reduced by up to

64% over 6 to 11 weeks of using **no!no!** twice a week. Start now and imagine how smooth you'll look by summer!

But you **MUST** use it at least twice a week. Remember, it takes patience and dedication to achieve long-term results.

“After 2 months I've hardly seen any hair grow back on my arms. Thanks no!no!”

— Susan, Central Coast

It won't happen overnight... but it will happen!

Take a look at what happened to this happy person on the left. These photos were taken for clinical observation during the trial. As you can see, in the first photo, there were 40 or 50 hairs, but look what happened after using **no!no!** twice a week for 6 weeks — you can only see about half the hairs growing back. But it's the next photos that really show the true power of **no!no!** This person was asked to stop all hair removal (including **no!no!**) for 2 weeks and then a further 4 weeks. As you can see at both 2 weeks and 6 weeks after treatment, the hair still hasn't grown back!

Unlike laser, any skin colour or hair colour can use no!no! Even if you can afford laser hair removal, you would have to fall into the 10% of

people on whom it works to even try it. You see, laser can only be used if you have dark hair on light skin. But you can use **no!no!** no matter what your skin or hair colour is! It even works on the blondest hairs!

This is such an incredible technology, there is nothing else like it in the world!

no!no! not only slows down hair regrowth — over time, it actually helps keep it from growing back!

Just imagine how much you'll save over time! No more shavers, no more waxing, no costly laser, just easy, pain free hair removal.

HURRY! no!no! is one of the fastest selling beauty items in the world today—over 1 million units have already been sold. no!no! is a best seller in Sephora in the USA and Selfridges and Harrods in London, and is the best selling beauty item in Spain's famous Corte Ingles department store.
